
Representations Of Discrete Functions

neural discrete representation learning - arxiv - neural discrete representation learning aaron van den oord deepmind avdnoord@google oriol vinyals deepmind vinyals@google koray kavukcuoglu deepmind korayk@google abstract learning useful representations without supervision remains a key challenge in machine learning. in this paper, we propose a simple yet powerful generative **discrete-time signals and fourier series representation** - chap 3 - discrete-time signals and fourier series representation 3 | p a g e generating discrete signals often there is a need when doing math to distinguish between continuous-time (ct) and discrete-time (dt) signals. the convention is that a discrete-time signal is written with square brackets around the time index, n , whereas **discrete and continuous representations of unobserved ...** - discrete and continuous representations of unobserved heterogeneity in choice modeling michel wedel university of groningen wagner kamakura university of iowa neeraj arora virginia tech albert bemmaor essec, cergy-pontoise jeongwen chlang hong kong university of science & technology terry elrod university of alberta rich johnson sawtooth ... **discrete representation of signals - researchgate** - 682 proceedings of tee ieee, june 1972 (1) where 64 is used to denote continuous-time convolution. let us denote the discrete representation of $f(t)$, $g(t)$, and $h(t)$ by f_n , g_n , and h_n , respectively. **learning disentangled joint continuous and discrete ...** - continuous and discrete representations in an unsupervised manner. by augmenting the continuous latent distribution of variational autoencoders with a relaxed discrete distribution and controlling the amount of information encoded in each latent unit, we show how continuous and categorical factors of variation can be discovered automatically from data. **the phasebook: building complex masks via discrete ...** - representations, either discrete or continuous; we also propose to directly model a complex mask without magnitude-phase factorization by combining a complex codebook, or combook, with a softmax layer to build various complex mask representations. these representations are flexible and can be incorporated within optimization **discrete representations of random signals** - discrete representations of random signals. in many problems a conversion is necessary between a signal of continuous form and a signal of discrete form. this conversion should take place with small loss of information but still in as efficient a manner as possible. optimum representations are found for a finite time interval. **sparse directional image representations using the ...** - sparse directional image representations using the discrete shearlet transform glenn easley system planning corporation, arlington, va 22209, usa demetrio labate;1 department of mathematics, north carolina state university, campus box 8205, raleigh, nc 27695, usa wang{q lim department of mathematics, washington university, st. louis ... **detection of singularities by discrete multiscale ...** - the realm of discrete representations. specifically, the techniques developed for the analysis of the continuous shearlet transform and leading to asymptotic estimates, as $a \rightarrow 0$, do not carry over to the analysis of discrete shearlet coefficients and some important features of the continuous analysis are lost. **frequency-domain representation of discrete-time signals** - frequency-domain representation of discrete-time signals 65 this implies that $x(k)$ is periodic with a period of n , even though $x(n)$ is aperiodic. thus for a discrete-time signal, we cannot obtain the full spectrum (frequencies from **usf available technologies automated geometric ...** - discrete point sets. inventors at usf have developed a novel method of developing smooth analytical geometric representations based on discrete point sets. the benefit of this invention is the reduction of time required to convert a set of discrete points from an imaging system, such as mri or ct scans, **neural discrete representation learning** - neural discrete representation learning aaron van den oord deepmind avdnoord@google oriol vinyals deepmind vinyals@google koray kavukcuoglu deepmind korayk@google abstract learning useful representations without supervision remains a key challenge in machine learning. in this paper, we propose a simple yet powerful generative **deformations of representations of discrete subgroups of ...** - deformations of representations of discrete subgroups of $so(3,1)$ michael kapovich department of mathematics, university of utah, salt lake city, ut 84112, usa received april 27, 1993; in revised form september 23, 1993 mathematics subject classification (1991): 57m50, 22e40, 30f40, 53c15 1 introduction **discrete and continuous representations of unobserved ...** - discrete and continuous representations of unobserved heterogeneity in choice modeling michel wedel university of groningen wagner kamakura university of iowa neeraj arora virginia tech albert bemmaor essec, cergy-pontoise jeongwen chlang hong kong university of science & technology terry elrod university of alberta rich johnson sawtooth ... **discrete-time representation of continuous-time signals** - physical signals are usually defined in continuous time, but signal processing is done more efficiently digitally and for discrete-time signals. a continuous-time signal $x_c(t)$ is specified by an (uncountable) infinite number of signal values in every interval, whereas a discrete-time signal $x_d(n)$ consists of only one signal value in each ...
